

GEOPATHIC STRESS AND BLOCKAGES

By Ian Muir, BSc, CEng, MICE, MRadA

In 1957, whilst working as a civil engineer on the new A74 Carlisle to Glasgow road, Ian Muir encountered numerous problems locating unknown underground services. A Highlander colleague demonstrated the dowsing technique which kindled his interest in the art and science of dowsing, which he has since used in connection with his engineering work. Some 15 years later he became interested in geo-pathic stress and matters medical and qualified as Radionic Practitioner in 1987. Ian gave the following talk at the RA Annual Healing Conference held at Sparsholt College in April 1991.

Introduction

My particular interest in the field of dowsing, apart from Radionics, is in locating adverse energy lines and underground streams which are causing health problems in dwellings, and then in neutralising their effects by changing their energy form.

These adverse energies cause geopathic stress, which can be defined as the stressful effects upon health of humans, animals and plants, caused by abnormal energy fields associated with a particular habitat or location.

This stress seems to form a blockage to any form of medical and healing therapy (both orthodox and complementary therapies) so they must be given special, and early, consideration on the assessment of patients' health problems; and this stress must be eliminated during the initial stages of healing treatment.

So, my talk is about geopathic stress and blockages, and I now shall give a brief explanation about the various types of energies involved.

Type of Energies – General

The energy patterns of the earth, whether they are electro-magnetic, gravitational or other energy fields, are not homogenous but they do change according to their geographical location. For example, satellite detectors have mapped fluctuations in the earth's gravity field.

It is also known that the presence of large mineral deposits such as iron ore, quartz etc., affect the magnetic fields in the overlying region.

There is also evidence to suggest that the earth has its own energy meridian system made up of grids of energy channels, etc., which are in turn affected by cosmic influences from the sun, solar flares, moon and planets. Earthquakes and volcanic activity also affect the earth's energy system.

Science is aware of very few types of energies and the complex combinations of these produce the world as we know it. These energies are:-

- (a) The electro-magnetic force
- (b) The gravitational force
- (c) Nuclear strong force
- (d) Nuclear weak force

Two other forces are being investigated, but little is known about them except that they are both related to gravity and appear to be equal and opposite. There may be others?

Matter is composed of energy. Einstein said so, early this century. We also know that energy acts with other energies to produce some form of effect, e.g. two magnets either attract or repel – we

cannot see or touch the magnetic field but we know it is there. All the world vibrates, everything has a frequency or vibration, from the cells of the little fingers to the complex molecules of the brain.

The building blocks of atoms vibrate and atoms can be stable or unstable depending on their electrical charge. Water changes from ice – water then to steam – due to temperature or frequency change, and thus one energy field can affect another. Cosmic radiation also can affect energy fields, thus affecting change in people.

Earth Energies

There are also earth energies and these have to exist as the planet earth itself is a very dense mass of energy.

It is thought that earth energy is like the energy meridians that the human body has associated with it in Eastern medicine. They are closely linked to the Chinese concept of dragon energies. The general idea is that from one point on the surface of the planet to another is a band of energy and that this energy could either be good or bad. In some areas several of these bands of energy may join or cross over. These energies are believed to be moderated by local objects in the environment. These include geological faults, mineral deposits, underground water and caves. This energy is also associated with the energies that people claim exist at ancient sites such as stone circles, e.g. energy lines I believe are attracted by the mass of mountains (lines between hills), sometimes rivers; roads. The direction of energies changes at sunrise and sunset.

The so-called 'ley lines' are part of the earth's energy system. These are alignments across the country of the number of ancient objects – churches, crosses, stone circles etc.

The Hartmann Net

This is an electromagnet grid of north to south and east to west energy lines related to the magnetic north, identified by Dr. Ernest Hartmann, and thought to be of cosmic origin. The grid lines vary from 2.00 to 2.50 metres apart. The band widths increase during the full moon and at high sunspot activity and changing weather fronts. There is a phase change of energy every six hours.

The Curry Grid

Discovered by Dr. Whitman and Dr. Manfred Curry, this grid is the result of Dr. Curry's research at the Medical and Bio-Climatic Institute in South Germany. It runs diagonally to the Hartmann Net.

Lines have a regular diagonal pattern 3.5 metres square and, similarly to Hartmann's, the lines are charged – and +. When two similarly-charged lines intersect, the disturbance is particularly strong.

The energy systems and lines seem to be random in North-East England; very rarely have I found the German geometrical patterns. In town areas, energy lines seem to be sprayed from buildings and roundabouts. I have also found they are carried along motorways by the energy generated by traffic flows.

I have also found that energy lines can change direction at sunrise and sunset; but sometimes reverse direction at least four times during twenty-four hours, and sometimes the alignment changes slightly. Moon phases can also change the alignment.

They also seem to 'disappear' at times; it may be that they are always there but before earthquakes, for example, weaker lines become stronger and a dowsing response can be obtained.

Schumann Waves

The Schumann Waves, which are also important to human well-being, were identified in 1952 by Prof. W. O. Schumann of Germany. These waves have a frequency of 1-20 Hertz (speed of waves

in cycles per second) which coincides with the human brain's waves of 8 Hertz. It is claimed that Schumann Waves represent the biological tuning mechanism of the earth without which living organisms cannot survive. From animal experiments it has been found that animals shielded from the Schumann Waves became distressed and eventually died. Steel and concrete buildings reduce the Schumann Wave resonances and the results of deprivation of Schumann Waves can be observed in the phenomenon of jet lag; the waves are greatly reduced in high-flying aircraft.

Space scientists, however, soon learned to install Schumann Wave simulators in manned spacecraft after early astronauts returned home with distress symptoms caused by deprivation of the waves.

Underground Water

The energy effect from polluted subterranean water flows in streams or veins anything from a few inches wide to 10 metres (33 foot) or more. It is thought that fast-flowing water is more detrimental to health and where two streams cross, even at a substantial difference in depth, the disturbance is even greater. Surface water does not emit harmful radiation.

Black streams are polluted underground streams with a reputation for inducing poor health (rheumatism, asthma).

Cosmic Energies

Another type of energy is the cosmic influence from the sun, moon and planets. All these influences affect the earth's energy systems which, in turn, affect human, animal and plant life. It is well known that the good vintage years coincide with high sunspot activity; and planting vegetables during the waxing moon is more beneficial than when the moon is waning. There is very high sunspot activity at present.

Solar flares thirty-six times the size of the earth were recorded in March 1989 at Sacramento Park, New Mexico, which astronomers said disrupted short-wave radio transmissions.

Man-made Energies

Man-made energies come from radar, T.V and radio transmissions, microwave communications systems, CB radios, VDUs, cellular telephones, microwave ovens and, not least, electrical power line systems. Never before has the level of electromagnetic radiation in the environment reached such a scale and pervasiveness as now.

The energies emanating from these sources have added to the distortion of the earth's natural energy fields. Some of these man-made energies are, I believe, leaking into the earth's natural energy system and further causing disharmony to organic life.

Radiation

Some time ago, in April 1987, Chernobyl nuclear power station exploded. We all know what happened then. Recent disclosures indicate that some areas of Britain, the Lake District, parts of South-West Scotland and Wales have now higher levels of radiation than previously measured. In some areas it has doubled.

Remember what happened to the volcano Krakatoe: a whole Indonesian island disappeared and the massive dust cloud from it was observed for many years afterwards going around the world, steadily depositing its dust.

A recent report from Chernobyl reads that nearby forest trees have grown to gigantic size and pine needles are ten times larger than normal. Scientists there have found high levels of radioactivity contamination in reservoirs, fish and wild animals. Another 100,000 people have been moved away

from the area. In farms in the region there has been a large increase in pigs and calves born with deformities.

Consequently, in many countries the water, soil, grass, plants and vegetation have been contaminated and, subsequently, the whole food chain. It could also be that Chernobyl radiation is leaking into the earth's energy systems and affecting health.

Electric Power Distribution System

Many scientists both in the US and here have voiced their growing concern about the likely biological effects on people from the electromagnetic fields from overhead power lines.

US/New York State Power Lines: a five-year research project published findings in July 1987. This report linked high voltage power lines with cancer, especially leukaemia's and with certain behaviour patterns.

A previous report in 1978 resulted in a decision to establish corridors along HV power lines; residences would not be allowed within 350 feet of these. This report concluded that the magnetic fields (not electrical) produced by HT were more important when considering any health hazard.

In 1979 the first controlled study linking power line fields and childhood leukaemia was reported upon by Wertheimer and Weper (University of Colorado). They carried out a case control study of 328 children in the Denver area and found a correlation with childhood cancer in exposed children versus controls.

In 1948 Dr. David Dowson, a GP in Ferndown (Bournemouth area) did a similar study of patients in his area. He realised there was an abnormally high increase of malignant diseases and other health problems in his own practice. In this country power lines carry 400,000 volts pulsed at 50 times per second, whereas in the US the maximum is 765,000 at 60 Hertz. Many people now, including experts, believe that electromagnetic fields from these can affect natural body rhythms and the immune systems of sensitive people.

A study to determine whether people living below overhead power lines are more likely to develop cancer was recently launched by the Central Electricity Generating Board. The £500,000 project follows claims that electromagnetic fields can also cause migraine and depression.

German Researches

A great deal of research has been carried out by Germans, particularly von Pohl in the 1930's, and more recently by the Austrian Kathe Bachler, into earth energy systems and their effects upon humans, animals and plants. They connected the incidence of cancers with the position of geological faults and energy lines.

In plants it was shown that oak trees have an affinity for underground water and enjoy that particular energy environment. Pear and apple trees dislike energy lines; whereas cherry and plum trees do like them. Herbs also seem to enjoy radiation from energy lines.

In the animal kingdom almost all animals avoid earth radiation and they tend to fall ill when stabled above energy lines. Cats seem to be the great exception – they enjoy the energy environment. Ants always seem to build their nests over an energy line or underground stream.

Kathe Bachler, the Austrian mathematics teacher, carried out extensive research programmes to establish the relationship between geopathic stress and school performance. She tested 3,000 houses and interviewed 11,000 people. Her research is heavily documented with precise scale drawings and case histories to match. She proved that 95% of the so-called 'slow learners' – and generally children with problems – had their beds on either water or energy lines. Kathe Bachler did not, however, restrict her research to school children but also interviewed 500 people who suffered

from cell growths (benign or malignant) and the statistics she drew up of the first 150 cases showed in every case of cancer or tumour that the patient was exposed to two factors at least, i.e. an energy line or water crossed by a Curry line.

In her book, *Discovery of a Dowser 1978* she lists ten symptoms as indications of geopathic stress:-

1. Aversion to the bed, and to going to bed.
2. Not being able to go to sleep for hours.
3. Restless sleep, crumpled sheets, nightmares, crying out.
4. Avoiding certain spots in the bed, falling out of bed; rocking and head banging.
5. Leaving the bed, sleepwalking.
6. Being cold in bed, shivering, grinding and chattering of teeth; also night sweats.
7. Fatigue and apathy in the morning, often lasting all through the day.
8. Lack of appetite, even vomiting in the morning.
9. Despondency, nervousness, depression; 'just not feeling well'; crying after waking in the morning.
10. Cramps; increased heart rate (in bed) (palpitations).

Most Continental research and findings imply that geopathic stress is due to the presence of energy lines, particularly over the bed situation. So, for many years people on the Continent have been aware of the harmful effect of a particular habitat upon their health and that all living organisms owe their state of health in part to the influences derived from the earth as well as from solar / magnetic forces. Perhaps the pragmatic, educated Brits should also take note!

These energy fields, whilst perhaps not directly affecting people, seem by a process of induction, to make them more receptive to illness (especially if they sleep eight hours every night on intersecting energy lines).

For instance, negative energies drain energy from the body and appear to relate to energy deficiency disorders e.g. fatigue, cancers, rheumatism, multiple sclerosis etc. Positive energies, an excess energy state, relate to hypertension, cardiac problems, strokes, mania, migraines.

Contaminants [a table listing contaminants which was shown as a slide is reproduced below]

Partial possession of patient also tends to block any form of healing, thus the clearance of entities must be carried out in the early stages of treatment. Entities seem to enjoy the energy environment of the earth's energy system, particularly in the spirals which occur at the intersection of energy lines.

Elimination can be carried out via the hair sample using instruments and the appropriate treatment rates, i.e. Possession, Psychic Interference, Psychological Stress. Obsession, Restore Damage and Rent to Aura and Over-shadowing by Elemental. Patients with reduced vitality or those with nervous / psychological problems are more likely to attract entities. However, practitioners should check themselves when treating patients with entities, as entities can migrate into the practitioner's own energy field. Hence the importance of washing hands and forearms with cold water after each treatment.

The polarity of the patient should also be checked and treated, if necessary, by the rate for magnets or nosode, as this also impedes healing; and, of course, one should not forget the need for checking and elimination any miasms.

Neutralizers

There are various devices in the market claiming the removal of harmful energy fields. For example:-

- a) The Moody Coil – a copper coil with an aerial and an earth.
- b) The Beadon Cube – which seems to displace the energy field.
- c) The Rolf Gordon device – Raditech.

- d) Iron discs or rods placed up-stream on energy line.
- e) Copper discs or rods placed up-stream on energy line.
- f) Bar magnets placed up-stream on energy line.
- g) Strips of aluminium or aluminium foil.
- h) Semi-precious stones (quartz and amethysts).
- i) Blue colourings.
- j) Prayer / Spiritual healing (change polarity of energy).
- k) Cacti – Cereus Peruvians.

However, I mainly use steel or copper rods or coils and the semi-precious stones (quartz and amethysts). Before neutralizing the harmful effects of energy fields I usually request a house plan or map of the area so that by map dowsing I can assess the problem and ascertain the type of energies involved and the appropriate remedy. Underground streams cause many problems – arthritis, bronchial problems, sleeplessness etc., and perhaps some examples might be of interest.

Patient P.H had just moved about six months previously into her new home, situated close to sand and gravel quarries. Patient was a T.B type, prone to catarrhal nasal / colds etc., and only developed asthma after the move to her new home. After two weeks initial treatment I requested a house plan and, by map dowsing, found about underground streams straddling the house running directly under the bed and through the kitchen, lounge and dining room areas. The whole house was affected. Her husband was ok but her daughter began to develop bronchial problems. I later visited the house and fixed copper rods outside on the up-stream centres of the underground streams. Two weeks afterwards the patient had improved tremendously – from gasping and wheezing with every word uttered to running uphill after her dog which had escaped from the house during lambing time. No shortage of breath and no distress was felt by the patient. Her daughter also improved in health very quickly.

Another case concerned two underground streams at different levels crossing under a house. At the crossing position, a harmful spiral of energy was formed. In this case amethyst set accurately on the centre of the spiral neutralized the harmful radiations. Underground streams (polluted) I believe create a zone of harmful energy, and obviously its worst effect is over the centre line of the streams' alignment.

In neutralizing energy fields and lines, I mainly use quartz and amethyst by fixing them accurately over the alignment on the incoming side. Remember that the direction of energy flows can change at sunrise and sunset or at four-hourly intervals during the day's cycle. Sometimes new lines can come in during the night so map dowsing is quite helpful as one can dowse for energy lines at, say, four-hour intervals.

There does not seem to be any standard procedure to neutralize energy. Every house seems to have its own variations of energies; however, I generally carry out my dowsing surveys in the following manner

- a) Map dowse house or site if possible.
- b) Initial survey of premises, familiarization and determining layout.
- c) Dowse for entities (in house and on people), eliminate.
- d) Dowse for underground streams, then neutralize.
- e) Check dowse for earth energies and eliminate.
- f) Check for man-made energies.
- g) Final check over premises to make sure all adverse energies have cleared.

Remember that the alignment of earth energies may drift at the change of moon phase or over a period of time, and allowance should be made for this. (Or follow-up visits).

Conclusion

I hope I have been able to illustrate the various types of energies likely to cause disharmony, emphasising the need to check whether these radiations are forming blockages to treatment.

During the initial Radionic treatment of patients, I have realised that some have not responded or only given marginal response, despite regular treatment. Sometimes there has been response followed by lapse. Re-checking has usually indicated that geopathic stress, radiation, radiation X factor and physical stress were evident, thus forming blockages to Radionic treatment. I have been asked to do a lot of 'house healing' for homoeopaths and other therapists who also realise the importance of geopathic stress.

Over these last few years, I have found that people living in those houses where the harmful effects of energy lines had been removed usually felt much better afterwards and responded very quickly to treatment. Hence, I believe that energy lines are a causative factor in all kinds of diseases and that geopathic stress is noticeably becoming an important factor for special consideration in the treatment of patients.

QUESTIONS

Q: I had an aforementioned line running through my bed, and I did it both upstream and downstream, in my innocence: is that going to be of any use?

IM: Yes, because it changes direction.

Q: How high from a polluted stream, a black line, does this or could this influence reach, in terms of one floor, or...?

IM: I have worked on a seven-storey building, on the top floor, and I was still picking up energy there. I've even tried dowsing aeroplanes!

Q: I was told off for doing this because I was told, "What you are doing is polluting that black energy and sending it off somewhere else – thank you very much!" Is that so, or not?

IM: Well, initially I used to divert energies, try and divert them so that they would not cause harm to any other people but now what I try to do is change the form of energy so it does not affect anybody anywhere.

Q: That's using amethysts as opposed to putting in rods?

IM: I use quartz and what happens is, the line hits the quartz and it changes the form of the energy. But with the drift, sometimes you get a drift of as much as three feet, over a period of years, and so you have got to recheck, perhaps, after a while. When you put the quartz down, you can put the quartz down the right way or the wrong way – there is a right way and a wrong way of putting stones down.

Q: Will you explain that? The right way and the wrong way?

IM: I just dowse on the stone, "Is this the correct orientation for it?" So, orientation and direction; if you get a stone, a washed pebble has got a flat side and a rounded side: "Is that the right way?" – "which orientation?" On a big median energy flow, I have to widen the device by having a bag, and placing quartz stones in, all the right way. Now, if you've got one bad one it upsets the whole thing, so you have got to make sure they are all right. That does give you a wider dispersal and you can work out how many stones you need. That is for a really big major energy line. I tried to do this in the North-East of England on one of the main energy streams and that was coming from west to east over Tyneside, so a colleague and I went and put this bag of stones on and it has been effective for two or three years.

Q: Would burying power lines just cause more stress?

IM: Well, it would have the same effect, because you get the same effect from underground cables coming up.

Q: You seem to have mentioned two different kinds of phenomena. On one hand, those problems that arise from water....On the other hand you have mentioned things arising from slaughtering of animals, suicide, etc. I am wondering which of them are astral, and whether you can distinguish them?

IM: With suicides you get the remanence of that particular event. If you've been in a prison camp or the German camps, you get this horrible feeling. This is what I pick up. So – energy lines, you can mentalise some of these energy lines or change their form, change their energy pattern from a harmful type to a healing type. You can do this by prayer. But sometimes if you do too much of that I feel it takes a lot out of you so I tend to do it just in bits. Sometimes if I can, I tend to use a physical thing, like quartz or iron or a semi-precious stone.... I tend to use steel and copper, quartz and amethyst for water. I use for earth energies mainly quartz, but I have used copper as well. I mentally try and change the type of energy.

Q: What do you think of the theory that in fact unbalanced or ill people tend to attract bad energy to them?

IM: I don't know whether ill people will attract bad energy. What they tend to attract is entities into their own depleted energy field. But I don't think they would attract bad energy.

Q: It is quite a commonly-held theory that quite often bad energy has actually been drawn to them, especially very highly unbalanced ones.

IM: I hadn't come across that one. I've found that the mental homes are probably full of people that have got entities in their systems; but not energies.

Q: Can you say anything about the high incidence of meningitis in the Stonehouse area?

IM: Yes! I did map dowsing from Sellafield, some map dowsing in Malvern and from Wales. Now, there is a power station in North Wales – it's got a big lake and it pumps its rubbish into the lake. We stayed with a friend of mine, or near where he lived, in Newport New Town in South Wales. An excellent dowser, he does map dowsing. Whilst we were there, he had done a map dowse of the energy flows to and from this power station in North Wales, which came right across the valleys. With map dowsers one wants to check with a second opinion. So, I was the second opinion. We drove my car for something like seventy miles across Wales and we followed this flow of radiation coming from that power station which went down the valleys and along the roads. Actually, I was doing the dowsing in the car and stopping every so often and getting out and checking. He actually map dowsed, using radon tablets to pick up lines of radiation coming from the power station. We went to the power station and I think we counted something like one hundred and fifty energy lines outside the front main gates, at about 2-foot intervals. There was a tremendous number. From there they went up onto a little knoll about two miles away and that knoll was bare of earth. And from that knoll they dispersed in different directions, they sort of spiralled out and went across Wales. That's only part of the story.

At the Malvern conference some years ago of the British Society of Dowsers, we were talking about the Stour problem and we were looking for what was causing meningitis in the Stout and Stonehouse area. We map dowsed it originated from one of the hills in the southern part of the Malvern Hills. So, a few of us went up and dowsed the area. The Malvern Hills run north-south and it was at the south end. We followed this spiral right up to the top of the hill and when we got there it was very strange. The thorn trees had shot up and were as thin as that – thorn bushes about six-foot-high with a stem about as thick as my finger. Very little vegetation and leaf on. They had clearly been in

circles and we found about three or four circles, about thirty-foot diameter; and they were gravel. We thought it was gravel: it was quartz. The top of that hill was bare of grass. The outside of the perimeter of all these things had all these stunted bushes. We picked up the thoughts and by dowsing we thought that this had been healed before by putting quartz round here. But we thought that was the source of the very bad energy which was a contributory cause to the problems of Stroud. It had been taken further with the local doctors there. Individually, they thought there might be something in it but collectively they wouldn't do anything about it. But, do you know, I think that has a bearing upon it.

In the northern area, Gateshead has one of the highest incidences of leukaemias in Britain. Much worse than around the power stations. And I think it is a combination of these energy lines across the country, radiation, which is causing child leukaemias.

Q: You have mentioned all the negative energies....

IM: There are some good ones too, yes.

Q: Every negative needs a positive to support it; what has happened to all the positive energies?

IM: I don't know, but....[laughter].... There's a place in Glastonbury which is beautiful: not on top, on the Tor, but the well at the bottom. If you've been there..... it is beautiful energy there. Some churches still retain them.

Colin Bloy (Compère): Talking of which, Ian – bringing the session to an end with great thanks to you – I am happy to record that two weeks ago, in Kiev, a delegation from Fountain International to a replica of the cover of that well to have installed in Kiev Cathedral so that the oldest site in Christianity in Britain and that in Russia could be united in a common ethos. You struck a right chord at the end there! Thank you so much.

SUGGESTED LIST OF POLLUTANTS / CONTAMINANTS, ETC. (LIKELY TO CAUSE STRESS)

Contaminant	Type	Remarks
1. Radiation	Solar activity – sunspots - moon	Invisible: UV light - effect on weather patterns – earth-quakes.
2. Radiation	Chernobyl, Sellafield, from atomic power establishments.	Airborne – fall-out associated with rainfall. Invisible: Caesium 137, Plutonium, etc.
3. Radiation	Underground streams (polluted).	Invisible: energy zone at ground level.
4. Electromagnetic radiation	Earth's energy systems.	Invisible: affected by solar system, moon, earthquakes.
5. Electromagnetic radiation	Radio / radar waves from civil / military establishment, X-rays, microwaves, overhead power cables, VDUs, etc.	Invisible.
6. Gas	Radon	Invisible: seepage from underground (problems in Cornwall).
7. Gases (Industrial)	Dioxins / Carbons / Sulphurs / Others	Invisible: Airborne: from incinerators, chemical and industrial plants.
8. Gas	Methane	Airborne: industrial plants, animals, acid rain, smog.
9. Gas	Vehicular exhausts	Fumes; CO ² ; lead; benzene, smog.
10. Pesticides & Nitrates	Various	Food and water.
11. Heavy Metals	Lead, aluminium, mercury	Water: teeth.

List not exhaustive but could also include noise, smells, pollens, etc.
